

FitBuddy – AI Fitness Plan Generator using Gemini Models

Project Description:

FitBuddy is a web-based application that uses AI to generate personalized workout plans and nutrition tips based on a user's fitness goals, such as weight loss, muscle gain, or general wellness. Built with FastAPI and integrated with Google's Gemini AI models, FitBuddy simplifies the process of creating structured and effective fitness routines.

The application takes in user information—like age, weight, goal, and preferred workout intensity—and generates a customized 7-day fitness plan. Users can also submit feedback to update and refine their plan using AI. A complementary nutrition or recovery tip is also provided based on their selected goal.

With a clean user interface and database support via SQLite, FitBuddy ensures each user's data and generated plan are stored and accessible. It offers both API endpoints and an interactive HTML interface for ease of use.

Scenarios:

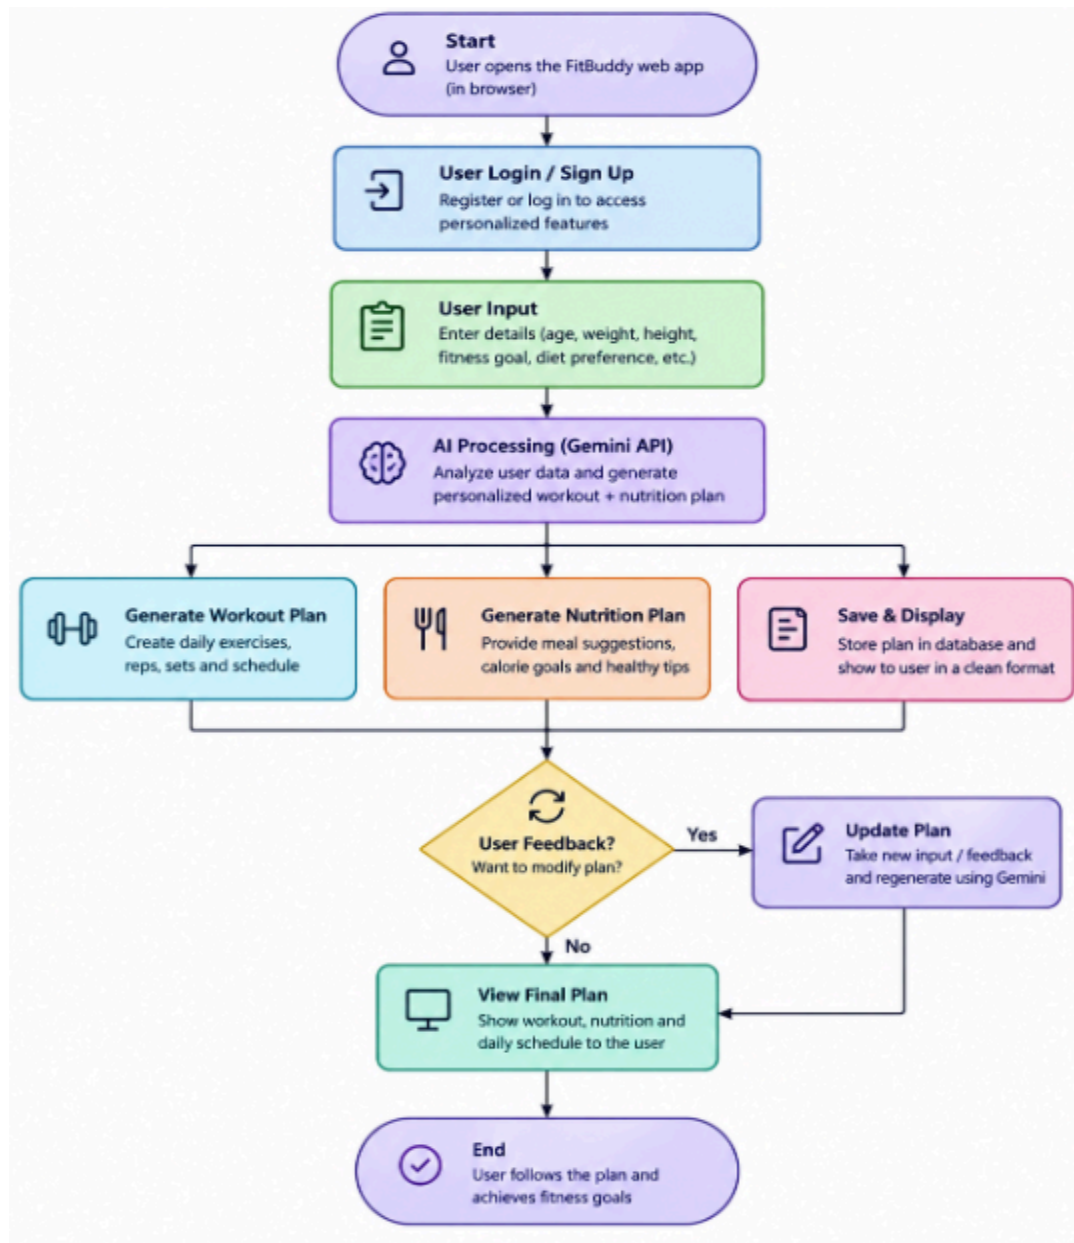

Scenario 1 : A user inputs their personal details including name, age, weight, fitness goal (e.g., "weight loss" or "muscle gain"), and preferred workout intensity ("high", "medium" or "low") to receive a personalized 7-day workout plan. The system generates a day-by-day schedule tailored to the user's fitness objective and experience level. This AI-driven customization enhances user motivation and adherence by providing structured and goal-specific routines.

Scenario 2: A user submits feedback on their existing workout plan, such as suggesting changes like "more focus on cardio" or "include more rest days." The system uses this input to regenerate an updated workout plan, refining it based on the user's evolving needs. This feedback loop ensures that users stay engaged and receive dynamic fitness support as their preferences or progress change.

Scenario 3: A user requests a nutrition or recovery tip based on their selected fitness goal. The platform delivers a concise and relevant suggestion (e.g., "Include protein in your post-workout meal" for muscle gain), which complements the workout plan. These targeted tips help users improve results by aligning their diet and recovery practices with their physical training regimen.

Scenario 4: An admin or coach accesses the platform to view all registered users and their workout plans through a dedicated dashboard. This view allows them to track individual progress, compare original and updated plans, and monitor user activity. It streamlines oversight for trainers managing multiple clients or students.

Technical Architecture:

Pre - requisites:

1. FastAPI Framework Knowledge: [FastAPI Documentation](#)
2. Gemini API Familiarity: [Google Generative AI Documentation](#)
3. HTML, CSS, and Jinja2 Template Skills: [W3Schools HTML/CSS/Jinja2 Tutorials](#)
4. Python Programming Proficiency: [Python Official Docs](#)
5. Version Control with Git: [Git Documentation](#)
6. SQLAlchemy and SQLite Basics: [SQLAlchemy Docs](#)
7. Environment Setup (pip, virtualenv, or conda): [Virtualenv Guide](#)
8. Uvicorn ASGI Server: [Uvicorn Docs](#)

Project Workflow:

Milestone 1. Model selection and Architecture

Activity 1.1. Research and Select the Appropriate Generative AI

Model Activity 1.2. Define the architecture of the application

Activity 1.3. Set up the development Environment

Milestone 2. Core functionalities Development

Activity 2.1. Develop the core functionalities

Activity 2.2. Implement the FastAPI Backend to Manage Routing and User Input Processing

Milestone 3. route.py Development

Activity 3.1. Writing the Main Application Logic in routes.py

Milestone 4. Frontend Development

Activity 4.1. Designing and Developing User Interface

Activity 4.2. Creating Dynamic Templates with FastAPI's Jinja2

Milestone 5. Deployment

Activity 5.1. Preparing the Application for Local Deployment

Activity 5.2. Testing and Verifying Local Deployment

Milestone 1. Model selection and Architecture

In this milestone, we focus on selecting the appropriate **generative AI models from Google's Gemini family** for the **FitBuddy** application. This includes evaluating the performance and capabilities of multiple Gemini models to ensure they align with the application's core functionalities—such as generating personalized workout plans, updating them based on feedback, and providing tailored nutrition or recovery advice.

Activity 1.1: Research and Select the Appropriate Generative AI

Model Understand the Project Requirements

FitBuddy's AI model needed to:

- Generate structured 7-day workout plans
- Provide concise and actionable nutrition tips
- Update workout plans based on user feedback
- Perform well in real-time, web-based interaction

Model Evaluation

We initially experimented with several Hugging Face models:

- T5 & BART – For text generation (workout/nutrition)
- DistilBERT – For potential intent classification
- Bloom – For general purpose generation

While these models showed promise in basic text generation, they had notable

limitations. These models required:

- Hosting with Hugging Face or local GPU setup
- Fine-tuning or complex prompting to achieve structured plans

Final Model Selection

After comparative testing, we selected Google Gemini models for production:

- Gemini 1.5 Pro
 - Used for structured 7-day workout generation and plan updating
 - Delivers rich, context-aware, formatted responses reliably
- Gemini Flash
 - Used for generating fast, practical nutrition tips
 - Lightweight and efficient for quick API calls

Reasons for Choosing Gemini:

- API-based, easy to integrate with FastAPI
- Naturally understands structured formatting (days, sections)
- High accuracy with minimal prompt tuning
- Scalable and fast for feedback-based revisions

Activity 1.2. Define the architecture of the application Architecture

Overview: FitBuddy follows a modular FastAPI-based architecture-

- Frontend: HTML + Jinja2 templates for user input and display
- Backend: FastAPI for route handling and logic
- AI Layer: Google Gemini APIs (Pro & Flash)
- Database: SQLite with SQLAlchemy for persistence

Frontend Responsibilities: Users interact via-

- [index.html](#) – Input form
- [result.html](#) – Plan, tip, feedback
- [all_users.html](#) – Admin panel

Backend Responsibilities:

- Receives form data
- Calls Gemini models
- Stores user info and plans
- Renders dynamic templates

AI Integration Points:

- Workout generation & feedback updates → Gemini Pro
- Nutrition tips → Gemini Flash

Activity 1.3 Set up the development Environment:

Install Python & Pip: Ensure Python and pip are installed.

Create Virtual Environment:

```
python -m venv fitbuddy-env  
fitbuddy-env\Scripts\activate (Windows)
```

Install Required Libraries:

```
pip install fastapi uvicorn jinja2 sqlalchemy python-multipart google-generativeai
```

Run Server:

```
uvicorn app.main:app --reload
```

Visit <http://127.0.0.1:8000> for the app and [/docs](#) for API testing.

Set Up Project Structure:

Create folders: [/app](#) (Python files), [/templates](#) (HTML), [/static/images](#) (assets)

Milestone 2. Core functionalities Development

Activity 2.1 Develop the core functionalities:

Workout Plan Generation

Function: `generate_workout_gemini()`

File: `gemini_generator.py`

Implements the core logic to generate a personalized 7-day workout plan using user inputs such as goal (e.g., muscle gain, weight loss) and intensity (low, medium, high). The prompt is sent to the Gemini 1.5 Pro model, which returns a structured, day-wise plan including:

- Warm-up (5–10 mins)
- Main workout (exercise details, sets, reps)
- Cooldown or recovery tip

The output is returned to `routes.py` and rendered on the `result.html` page using `<pre>` blocks for formatting.

```
python

import google.generativeai as genai

genai.configure(api_key="YOUR_GEMINI_API_KEY")

def generate_workout_gemini(goal, intensity):
    model = genai.GenerativeModel("gemini-1.5-pro")
    prompt = (f"Create a personalized 7-day workout plan for someone with the goal "
              f"of {goal} at {intensity} intensity. For each day include a warm-up "
              f"(5-10 mins), main workout (exercises, sets, reps), and a cooldown "
              f"or recovery tip. Format clearly by day (Day 1, Day 2, ...).")
    response = model.generate_content(prompt)
    return response.text

if __name__ == "__main__":
    print(generate_workout_gemini("muscle gain", "medium"))
```

Nutrition Tip Generation

Function: `generate_nutrition_tip_with_flash()`

File: `gemini_flash_generator.py`

This function generates a concise, practical nutrition or recovery tip tailored to the user's selected goal. It utilizes the Gemini Flash model to deliver a fast, helpful response such as hydration advice, protein suggestions, or general recovery best practices. This tip is displayed beneath the workout plan in `result.html`.

```
python

import google.generativeai as genai

genai.configure(api_key="YOUR_GEMINI_API_KEY")

def generate_nutrition_tip_with_flash(goal):
    model = genai.GenerativeModel("gemini-1.5-flash")
    prompt = (f"Give one concise, practical nutrition or recovery tip for someone "
              f"whose fitness goal is {goal}. It could cover hydration, protein "
              f"intake, or recovery best practices. Keep it to 2-3 sentences.")
    response = model.generate_content(prompt)
    return response.text.strip()

if __name__ == "__main__":
    goal = "muscle gain"
    tip = generate_nutrition_tip_with_flash(goal)
    print(f"Nutrition Tip for {goal}: {tip}")
```

Feedback-Based Plan Updating

Function: `update_workout_plan()`

File: `updated_plan.py`

This function enables the user to revise their original plan by submitting feedback (e.g., "Add yoga", "Include more cardio"). The original plan and feedback are passed to Gemini 1.5 Pro, which returns a modified plan with the suggested updates. The updated plan is then stored and displayed alongside the new nutrition tip.

```

from google import genai
from .config import settings

client = genai.Client(api_key=settings.gemini_api_key)

def update_workout_plan(original_plan, feedback, user):
    prompt = f"""
    Update this 7-day workout plan based on the user's feedback.
    Original Plan:
    {original_plan}

    User Feedback: {feedback}
    Keep the plan personalized for {user.goal} and {user.fitness_level}.
    Return the complete updated plan with warm-up, workout and cooldown.
    """
    response = client.models.generate_content(
        model="gemini-1.5-pro", contents=prompt
    )
    return response.text

```

User & Plan Storage

Functions:

- `save_user()`, `save_plan()`, `update_plan()`
- `get_original_plan()`, `get_user()`

File: `database.py`

All user information (ID, name, age, weight, goal, intensity) and AI-generated plans are stored in a SQLite database via SQLAlchemy ORM. Feedback-based updates are saved as a separate field to preserve both versions (original and updated).

python

```
from sqlalchemy import Column, Integer, String, Float, create_engine
from sqlalchemy.orm import sessionmaker, declarative_base

Base = declarative_base()
engine = create_engine("sqlite:///fitbuddy.db")
Session = sessionmaker(bind=engine)

class User(Base):
    __tablename__ = "users"
    id = Column(Integer, primary_key=True)
    name = Column(String)
    age = Column(Integer)
    weight = Column(Float)
    goal = Column(String)
    intensity = Column(String)

class Plan(Base):
    __tablename__ = "plans"
    id = Column(Integer, primary_key=True)
    user_id = Column(Integer)
    original_plan = Column(String)
    updated_plan = Column(String)

Base.metadata.create_all(engine)

def save_user(name, age, weight, goal, intensity):
    session = Session()
    user = User(name=name, age=age, weight=weight, goal=goal, intensity=intensity)
    session.add(user)
    session.commit()
    return user.id
```

```

def save_plan(user_id, original_plan):
    session = Session()
    plan = Plan(user_id=user_id, original_plan=original_plan)
    session.add(plan)
    session.commit()
    return plan.id

def update_plan(plan_id, updated_plan):
    session = Session()
    plan = session.query(Plan).filter_by(id=plan_id).first()
    plan.updated_plan = updated_plan
    session.commit()

def get_original_plan(plan_id):
    session = Session()
    return session.query(Plan).filter_by(id=plan_id).first().original_plan

def get_user(user_id):
    session = Session()
    return session.query(User).filter_by(id=user_id).first()

```

Admin View of All Users

Route: `/view-all-users`

Template: `all_users.html`

Displays a list of all users and their respective plans. Rendered with Jinja2 using a `{% for user in users %}` loop, it allows administrators to see original and updated plans clearly in a structured table format.

```

python

from flask import Blueprint, render_template
from .database import Session, User, Plan

admin_bp = Blueprint("admin", __name__)

@admin_bp.route("/view-all-users")
def view_all_users():
    session = Session()
    users = session.query(User).all()
    plans = session.query(Plan).all()
    plans_by_user = {p.user_id: p for p in plans}
    for user in users:
        user.plan = plans_by_user.get(user.id)
    session.close()
    return render_template("all_users.html", users=users)

```

Activity 2.2: Implement the FastAPI Backend to Manage Routing and User

Input Processing

Define Routes in FastAPI

All routing logic is handled in `routes.py`. Each route is linked to the corresponding function developed in Activity 2.1.

Process User Input

- HTML Form: Created in `index.html`
- Users enter: `username`, `user_id`, `age`, `weight`, `goal`, and `intensity`
- FastAPI captures inputs using `Form(...)` parameters
- Pydantic schemas (`UserInput`, `FeedbackRequest`) are used to validate

Integrate Gemini API Calls

Each route handler connects directly to the respective Gemini-powered function:

- `/generate-workout` →
 - `generate_workout_gemini()` for workout plan
 - `generate_nutrition_tip_with_flash()` for tip
- `/submit-feedback` →
 - Retrieves plan
 - Sends original + feedback to `update_workout_plan()`

All AI-generated responses are returned cleanly and injected into the frontend templates for display.

Milestone 3. routes.py Development

Milestone 3 focuses on building the routing logic inside the `routes.py` file, which acts as the core operational layer of the FitBuddy application. It bridges the frontend templates, AI generation modules (Gemini Pro and Flash), and the SQLite database. Each route defines how user inputs are collected, processed, and responded to — creating a dynamic, personalized experience for fitness planning and feedback-based updates.

Activity 3.1: Writing the Main Application Logic in `routes.py`

Defining Core routes in `routes.py`:

Separate routes were implemented to serve each of FitBuddy's main functionalities:

1. `/` : Displays the user form via `index.html`

2. `/generate-workout`: Processes user input and generates a personalized workout plan

3. `/submit-feedback`: Updates the workout plan based on user feedback

4. `/view-all-users`: Displays an admin dashboard showing all users and their

Set up Route Handlers for Each Feature

➤ `/` – Home Route

- Returns the homepage (`index.html`)

- No form processing logic

➤ `/generate-workout` – Plan Generator

- Receives user input using FastAPI's `Form(...)`
- Constructs a `UserInput` Pydantic model
- Calls:
 - `generate_workout_gemini(...)` → Generates workout plan via Gemini 1.5 Pro
 - `generate_nutrition_tip_with_flash(...)` → Gets nutrition tip via Gemini Flash
- Stores:
 - User details with `save_user(...)`
 - Plan with `save_plan(...)`
- Returns `result.html` with dynamic data

➤ `/submit-feedback` – Update Plan with Feedback

- Captures feedback and `user_id`
- Retrieves original plan from DB
- Uses `update_workout_plan(...)` to revise the plan via Gemini 1.5 Pro
- Updates the revised plan in the DB using `update_plan(...)`
- Renders updated result on `result.html`

➤ `/view-all-users` – Admin View

- Calls `get_all_users()` and `get_all_plans()` to fetch DB records
- Passes them to `all_users.html`
- Admin can view:
 - Username, Age, Weight, Goal, Intensity
 - Original and updated workout plans

Integrate Gemini AI Responses in Each Function

Each AI-related route calls Google's Gemini models with specific prompts:

- Workout Plan Generation:
`generate_workout_gemini()` sends fitness goal and intensity to Gemini Pro to return a structured 7-day workout plan.
- Nutrition Tip Generation:
`generate_nutrition_tip_with_flash()` uses Gemini Flash to generate a practical tip related to the user's fitness goal.
- Workout Plan Update via Feedback:
`update_workout_plan()` passes original plan + user feedback to Gemini Pro and returns a revised plan.

All responses are returned to the user through `result.html`, maintaining clarity using `<pre>` blocks for formatting.

Workout generation route Nutrition/Recovery tip generation route

```
from flask import Blueprint, render_template, request
from .gemini_generator import generate_workout_gemini
from .gemini_flash_generator import generate_nutrition_tip_with_flash
from .updated_plan import update_workout_plan
from .database import save_user, save_plan, update_plan, get_original_plan, get_user

main_bp = Blueprint("main", __name__)

@main_bp.route("/generate-plan", methods=["POST"])
def generate_plan():
    goal = request.form["goal"]
    intensity = request.form["intensity"]
    user_id = save_user(request.form["name"], request.form["age"],
                        request.form["weight"], goal, intensity)
    plan = generate_workout_gemini(goal, intensity)
    tip = generate_nutrition_tip_with_flash(goal)
    plan_id = save_plan(user_id, plan)
    return render_template("result.html", plan=plan, tip=tip, plan_id=plan_id)

@main_bp.route("/update-plan/<int:plan_id>", methods=["POST"])
def update_plan_route(plan_id):
    feedback = request.form["feedback"]
    user = get_user(request.form["user_id"])
    original_plan = get_original_plan(plan_id)
    revised_plan = update_workout_plan(original_plan, feedback, user)
    tip = generate_nutrition_tip_with_flash(user.goal)
    update_plan(plan_id, revised_plan)
    return render_template("result.html", plan=revised_plan, tip=tip, plan_id=plan_id)
```

Nutrition/Recovery tip generation route

python

```
from flask import Blueprint, render_template, request
from .gemini_flash_generator import generate_nutrition_tip_with_flash
from .database import get_user

nutrition_bp = Blueprint("nutrition", __name__)

@nutrition_bp.route("/nutrition-tip/<int:user_id>", methods=["GET"])
def nutrition_tip(user_id):
    user = get_user(user_id)
    tip = generate_nutrition_tip_with_flash(user.goal)
    return render_template("result.html", tip=tip)
```

Saving user info and plan generation route

```
from flask import Blueprint, render_template, request
from .gemini_generator import generate_workout_gemini
from .database import save_user, save_plan

plan_bp = Blueprint("plan", __name__)

@plan_bp.route("/generate-workout", methods=["POST"])
def generate_workout():
    name = request.form["name"]
    age = request.form["age"]
    weight = request.form["weight"]
    goal = request.form["goal"]
    intensity = request.form["intensity"]

    user_id = save_user(name, age, weight, goal, intensity)
    plan = generate_workout_gemini(goal, intensity)
    plan_id = save_plan(user_id, plan)

    return render_template("result.html", plan=plan, plan_id=plan_id)
```

Submit Feedback and update plan route

python

```
from flask import Blueprint, render_template, request
from .updated_plan import update_workout_plan
from .database import get_user, get_original_plan, update_plan

feedback_bp = Blueprint("feedback", __name__)

@feedback_bp.route("/submit-feedback/<int:plan_id>", methods=["POST"])
def submit_feedback(plan_id):
    user_id = request.form["user_id"]
    feedback = request.form["feedback"]

    user = get_user(user_id)
    original_plan = get_original_plan(plan_id)

    revised_plan = update_workout_plan(original_plan, feedback, user)
    update_plan(plan_id, revised_plan)

    return render_template("result.html", plan=revised_plan, plan_id=plan_id)
```

Milestone 4. Frontend Development

Milestone 4 focuses on developing a user-friendly and visually structured interface for FitBuddy, the AI-powered workout generator. This involves building responsive and interactive web pages using HTML, CSS, and Jinja2 templating. Each template is dynamically rendered through FastAPI, ensuring users can easily submit input, receive personalized plans, provide feedback, and allow administrators to manage data effectively. This milestone guarantees an engaging and intuitive fitness planning experience for all users.

Activity 4.1 Designing and Developing the User Interface

Set Up the Base HTML Structure

- Developed `index.html` as the main entry point for user input.
- Structured the form to capture:
 - `username`, `user_id`, `age`, `weight`, `goal`, and `intensity`.
- Each field is properly labeled and grouped using semantic HTML.
- The design uses a gym-themed background image, Google Fonts (Roboto), and bold typography to create a clean, fitness-oriented interface.
- Navigation is kept minimal for focus, and user flow directs clearly from input to

output. Design a Responsive Layout Using CSS

- Embedded CSS styles were applied directly in each HTML file.
- Layouts use **Flexbox** to center content both vertically and horizontally.
- Media queries ensure mobile responsiveness.
- Buttons have consistent styling with hover effects.
- Input fields and result blocks have adequate padding, shadows, and rounded corners for modern aesthetics.

- Overall color scheme supports readability on a dark background.

Create Separate Pages for Each Core Functionality

Three Jinja2-powered HTML templates were created under `/templates`:

- `index.html`: A user input form with fields for fitness goal, intensity, and basic personal information.
- `result.html`: Displays the 7-day AI generated workout plan, a nutrition tip, and accepts user feedback.
- `all_users.html`: Admin panel to view and delete users and review both original and updated plans.

Templates are modular, and UI transitions smoothly between steps.

Forms are submitted to specific FastAPI endpoints via POST methods

Activity 4.2 Creating Dynamic Templates with FastAPI's Jinja2

Integrate Jinja2 Templating for Dynamic Content Rendering

- Used FastAPI's `Jinja2Templates` for template rendering:

```
from fastapi.templating import Jinja2Templates
BASE_DIR = os.path.dirname(os.path.abspath(__file__))
TEMPLATE_DIR = os.path.join(BASE_DIR, "templates")
templates = Jinja2Templates(directory=TEMPLATE_DIR)
```

- Each route uses `TemplateResponse` to render the proper HTML with passed context:

```
python

import os
from fastapi import FastAPI, Request
from fastapi.templating import Jinja2Templates

app = FastAPI()

BASE_DIR = os.path.dirname(os.path.abspath(__file__))
TEMPLATE_DIR = os.path.join(BASE_DIR, "templates")
templates = Jinja2Templates(directory=TEMPLATE_DIR)

@app.get("/result/{plan_id}")
async def show_result(request: Request, plan_id: int):
    plan = "Sample workout plan text..."
    tip = "Sample nutrition tip..."
    return templates.TemplateResponse(
        "result.html",
        {"request": request, "plan": plan, "tip": tip, "plan_id": plan_id}
    )
```

- This allows dynamic plan and nutrition tip display after form submission.

Bind Backend Data to HTML Templates

➤ **index.html**

- Form elements use `name="..."` to bind to backend `Form(...)` parameters.
- Submits data to `/generate-workout`.

➤ **result.html**

- Uses:
 - `{{ username }}`, `{{ goal }}`, `{{ intensity }}`, etc. to show user data.
 - `{{ workout_plan }}` and `{{ nutrition_tip }}` to show AI-generated results.
- Includes a feedback form submitted via POST to `/submit-feedback`.

➤ **all_users.html**

- Loops over all user records using:

```
</tr>
{% for user in users %}
<tr>
  <td>{{ user.id }}</td>
  <td>{{ user.name }}</td>
  <td>{{ user.age }}</td>
  <td>{{ user.weight }}</td>
  <td>{{ user.goal }}</td>
  <td>{{ user.intensity }}</td>
  <td><pre>{{ user.original_plan }}</pre></td>
  <td><pre>{{ user.updated_plan }}</pre></td>
</tr>
{% endfor %}
```

Milestone 5. Deployment

Now, the focus is on deploying the **FitBuddy** application on a local system using **FastAPI** and **Uvicorn**. The app uses **HTML templates rendered with Jinja2**, alongside AI services powered by **Gemini**. This milestone ensures all environment dependencies are correctly installed, and the app runs smoothly on a local server, preparing it for future deployment on cloud platforms.

Activity 5.1: Preparing the Application for Local Deployment

Set up a virtual environment

- Create a virtual environment to manage dependencies and isolate the FitBuddy project from other environments.
- Activate the environment and install all necessary dependencies listed in the `requirements.txt` file, including FastAPI, Uvicorn, SQLAlchemy, and Google Generative AI SDK.

```
python -m venv venv
```

```
source venv/bin/activate # On Windows: venv\Scripts\activate
```

```
pip install -r requirements.txt
```

Configure environment variables

- Use environment variables to store sensitive data such as the Gemini API Key. • These

variables can be set directly in the terminal or added to a `.env` file which is loaded into the application using `python-dotenv`.

`GOOGLE_API_KEY=your_gemini_api_key_here`

Frontend-Backend Rendering via Jinja2

All user interactions are facilitated via **Jinja2**-rendered templates:

- `index.html`: Collects user inputs
- `result.html`: Displays the generated AI plan
- `all_users.html`: Lists all user records for admin view

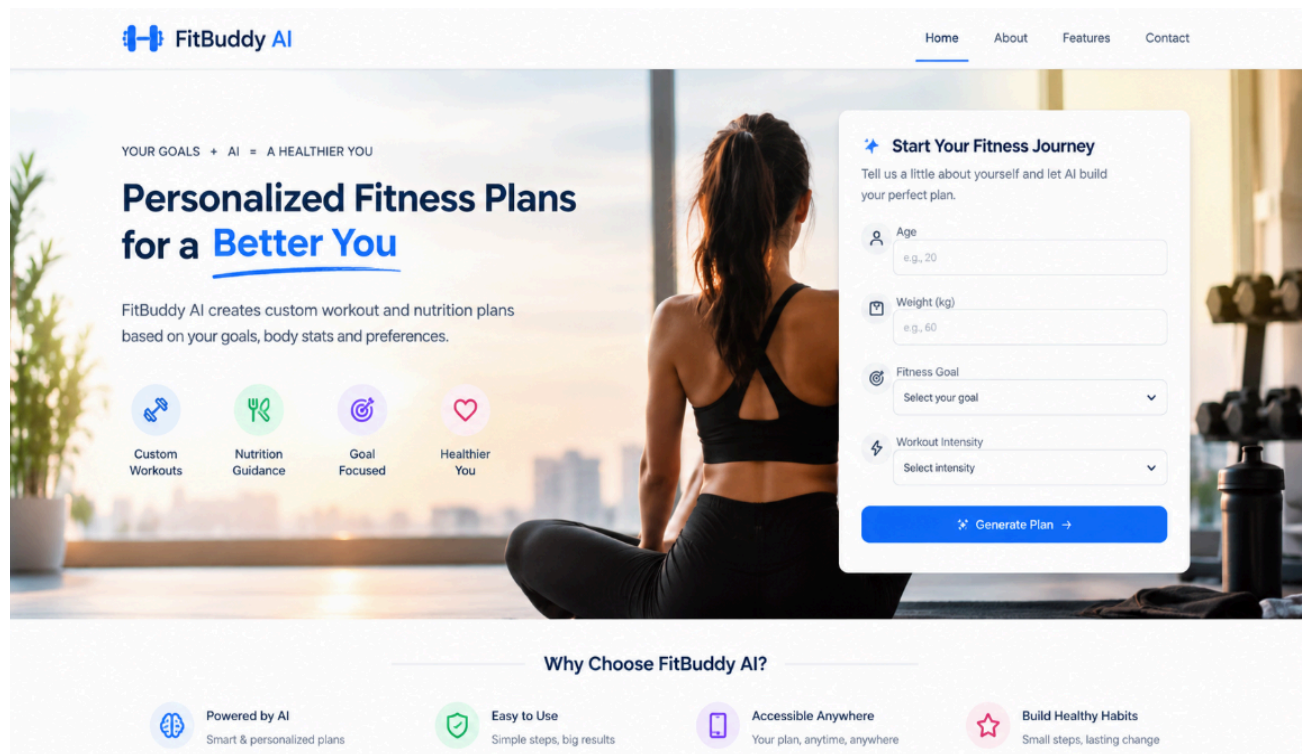

Activity 5.2: Testing and Verifying Local Deployment

Access the Application Locally

The FastAPI development server must be started using the command (`uvicorn main:app --reload`). Once the server is running, the application can be accessed through any web browser by navigating to `http://127.0.0.1:8000`. This URL loads the main user interface where individuals can input their details and generate personalized fitness plans. Additionally, the interactive API documentation provided by FastAPI can be viewed at `http://127.0.0.1:8000/docs`, allowing developers to explore and test available endpoints.

Exploring Website's web pages:

Home page:

Description: The homepage of **FitBuddy – AI Workout Generator** features a clean and engaging user interface designed to provide a seamless experience for users seeking personalized fitness plans. The form prominently displayed in the center allows users to enter essential information including:

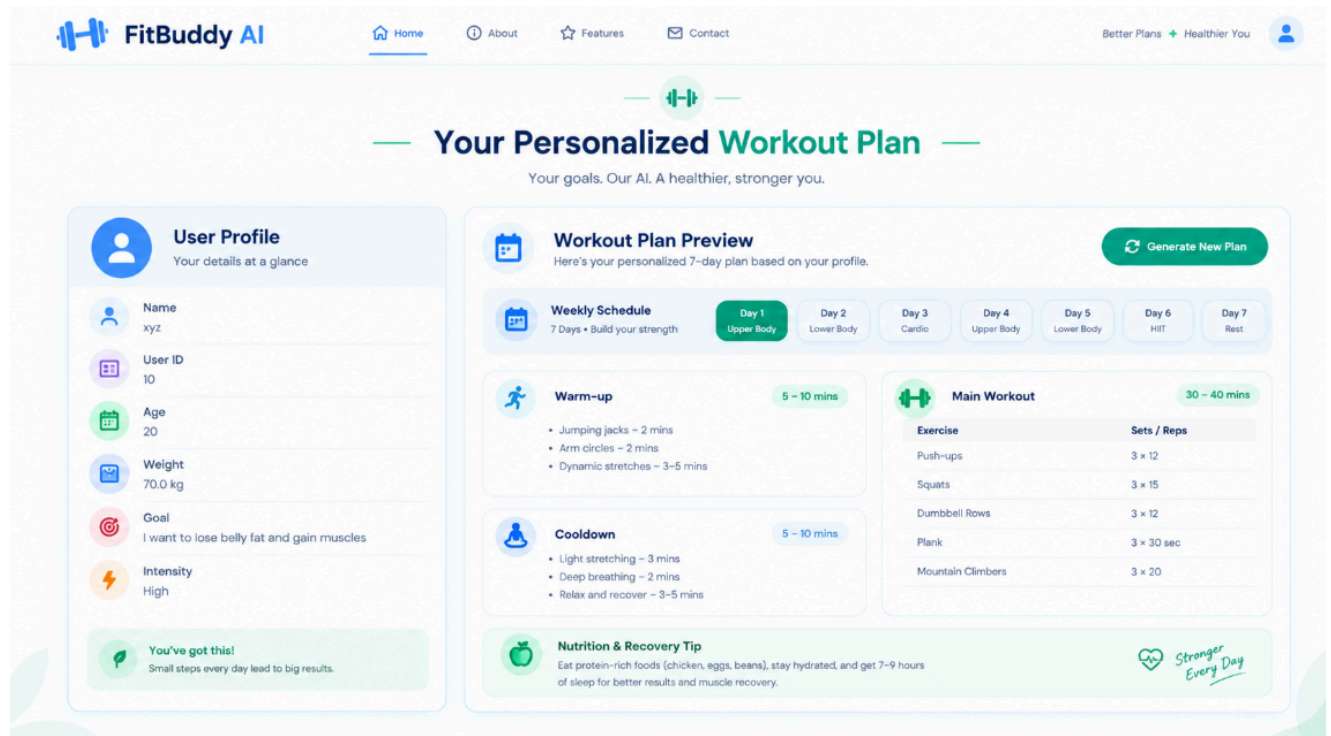

- **Name**
 - **User ID**
 - **Age**
 - **Weight (kg)**
 - **Fitness Goal** (e.g., weight loss, flexibility)
-
- **Workout Intensity** (Low, Medium, High)

Once users submit this data, they can click the **"Generate Plan"** button, which triggers the AI-powered backend to generate a customized workout and nutrition plan tailored to their goals and fitness profile. The visual appeal of the background image featuring an active individual reinforces the fitness-centric theme of the application, motivating users to take charge of their health journey.

This intuitive design ensures users of all experience levels can quickly get started with minimal effort.

Personalized workout generation page:

User Information:

Description: Once the user submits their details, the application navigates to a personalized workout plan page. This section displays a summary of the user's input including their **Name**, **User ID**, **Age**, **Weight**, **Fitness Goal**, and **Selected Intensity**. This personalized display ensures users feel acknowledged and guides the AI engine to generate relevant workout recommendations tailored specifically to their fitness journey.

Workout Plan:

Workout Plan

7-Day High-Intensity Workout Plan for Fat Loss & Muscle Gain

This plan focuses on compound exercises to maximize calorie burn and muscle engagement. Remember to adjust the intensity based on your fitness level and consult a doctor before starting any new workout routine. Proper nutrition is crucial for achieving your goals, so ensure you're supporting your training with a healthy diet.

Day 1: Upper Body Strength

* **Warm-up (5 mins):** 3 sets of 10-15 reps of jumping jacks (60 seconds), high knees (30 seconds), arm circles (forward and backward, 30 seconds each), dynamic stretches like arm swings and torso twists (1 min).

* **Main Workout:**

- * **Barbell Bench Press:** 3 sets of 8-12 reps
- * **Pull-ups (or Lat Pulldowns):** 3 sets of 8-12 reps
- * **Overhead Press:** 3 sets of 8-12 reps
- * **Barbell Rows:** 3 sets of 8-12 reps
- * **Dumbbell Bicep Curls:** 3 sets of 10-15 reps
- * **Dumbbell Triceps Extensions:** 3 sets of 10-15 reps

* **Cooldown:** Static stretches holding each for 30 seconds (chest, back, biceps, triceps, shoulders).

Day 2: Lower Body & Core

* **Warm-up (5 mins):** 3 sets of 10-15 reps of bodyweight squats (15 reps), lunges (10 reps per leg), glute bridges (15 reps), plank (30 seconds).

* **Main Workout:**

- * **Barbell Squats:** 3 sets of 8-12 reps
- * **Romanian Deadlifts:** 3 sets of 10-15 reps
- * **Walking Lunges:** 3 sets of 12-15 reps per leg
- * **Glute Bridges:** 3 sets of 15-20 reps
- * **Hanging Leg Raises:** 3 sets to failure
- * **Russian Twists:** 3 sets of 15-20 reps per side

* **Cooldown:** Foam roll quads, hamstrings, and glutes. Static stretches for hip flexors, hamstrings, and glutes (30 seconds each).

Day 3: HIIT Cardio & Core

* **Warm-up (5 mins):** Light cardio, like jogging or jumping jacks, followed by dynamic stretches.

* **Main Workout:**

- * **Burpees:** 3 sets of 10-15 reps
- * **Mountain Climbers:** 3 sets of 30-60 seconds
- * **Jump Squats:** 3 sets of 10-15 reps
- * **Kettlebell Swings:** 3 sets of 15-20 reps
- * **Plank variations (high plank, forearm plank, side plank):** 30-60 seconds each, repeat 2-3 times

* **Cooldown:** Light cardio cool down (5 mins), static stretches for core and legs.

Day 3: HIIT Cardio & Core

* **Warm-up (5 mins):** Light cardio, like jogging or jumping jacks, followed by dynamic stretches.

* **Main Workout:**

- * **Burpees:** 3 sets of 10-15 reps
- * **Mountain Climbers:** 3 sets of 30-60 seconds
- * **Jump Squats:** 3 sets of 10-15 reps
- * **Kettlebell Swings:** 3 sets of 15-20 reps
- * **Plank variations (high plank, forearm plank, side plank):** 30-60 seconds each, repeat 2-3 times

* **Cooldown:** Light cardio cool down (5 mins), static stretches for core and legs.

Day 4: Rest or Active Recovery

* **Active Recovery:** Light activity like walking, swimming, yoga, or foam rolling. Focus on mobility and flexibility. This helps promote blood flow and reduces muscle soreness.

Day 5: Upper Body Strength (Focus on different exercises)

* **Warm-up (5 mins):** Similar to Day 1.

* **Main Workout:**

- * **Incline Dumbbell Press:** 3 sets of 8-12 reps
- * **Chin-ups (or Close-Grip Lat Pulldowns):** 3 sets of 8-12 reps
- * **Arnold Press:** 3 sets of 8-12 reps
- * **T-Bar Rows:** 3 sets of 8-12 reps
- * **Hammer Curls:** 3 sets of 10-15 reps
- * **Overhead Triceps Extensions:** 3 sets of 10-15 reps

* **Cooldown:** Similar to Day 1.

Day 6: Lower Body & Core (Focus on different exercises)

* **Warm-up (5 mins):** Similar to Day 2.

* **Main Workout:**

- * **Front Squats:** 3 sets of 8-12 reps
- * **Good Mornings:** 3 sets of 10-15 reps
- * **Bulgarian Split Squats:** 3 sets of 10-12 reps per leg
- * **Hip Thrusts:** 3 sets of 15-20 reps
- * **Cable Crunches:** 3 sets to failure
- * **Wood Chops (cable machine):** 3 sets of 15-20 reps per side

* **Cooldown:** Similar to Day 2.

Day 7: Rest or Active Recovery

* **Active Recovery:** Similar to Day 4. Prioritize getting enough sleep this day to prepare for the next week of training.

Description: FitBuddy generates a personalized, day-wise workout plan tailored to the user's fitness goal, experience level, and preferred workout schedule. The workout section on the

result page outlines each day with a clear focus, such as full body, upper or lower body, cardio, core strength, or flexibility. For every workout day, a curated list of exercises is provided, detailing the name of the exercise, the number of sets and repetitions (or duration), and suggested rest intervals. The plan incorporates variety and structured progression to keep the workouts engaging and effective. Additionally, basic warm-up and cool-down guidance may be included to support safe and well-rounded training. Overall, this section aims to deliver a goal-oriented, easy-to-follow workout schedule that promotes consistency and progress.

Nutrition Tip:

 **Nutrition Tip**

Prioritize protein! Aim for a good source of protein (like chicken, fish, beans, or Greek yogurt) with every meal. Protein helps build muscle, keeps you feeling full, and supports your metabolism, all crucial for losing belly fat and gaining muscle.

Description: The **Nutrition Tip** section in FitBuddy provides users with concise, practical dietary advice to complement their workout plans. It emphasizes the importance of prioritizing protein intake in every meal, suggesting sources like chicken, fish, beans, or Greek yogurt. The tip explains how protein contributes to muscle building, satiety, and metabolic support—key factors for both fat loss and muscle gain. This section is designed to reinforce healthy eating habits that align with users' fitness goals.

Your Unique User ID:

Your Feedback:

Description: The Feedback Page in FitBuddy allows users to personalize and refine their fitness journey by submitting feedback on their current workout plans. Users are prompted to enter their unique User ID and provide specific feedback regarding the effectiveness, difficulty, or preferences related to their plan. Once submitted, this feedback is processed by the system to intelligently update and adjust the workout plan to better align with the user’s goals, comfort, and progress. This dynamic feedback loop ensures that each fitness plan remains adaptive and tailored to the individual’s evolving needs.

Once the plan is updated it comes with a confirmation message .

User ID	Name	Age	Weight (kg)	Goal	Intensity	Original Plan	Updated Plan
1	shreya	22	55.0	muscle gain	high	## 7-Day Muscle Gain Workout Plan (Medium Intensity) This plan focuses on compound exercises to maximize muscle growth and utilizes a push-pull-legs split with rest days strategically placed for optimal recovery. **Day 1: Upper Body Push** **Warm-up (5-10 mins):** * Arm circles (forward and backward, 1 min each) * Shoulder rotations (1 min) * Push-ups (as many reps as possible in 1 min) * Light bench press (empty bar, 1 set of 10-12 reps) **Main Workout:** * **Bench Press:** 3 sets of 8-12 reps * **Incline Dumbbell Press:** 3 sets of 8-12 reps * **Overhead Press:** 3 sets of 8-12 reps * **Triceps Pushdowns:** 3 sets of 10-15 reps * **Lateral Raises:** 3 sets of 12-15 reps **Cooldown:** Static stretching focusing on chest, shoulders, and triceps (hold each stretch for 30 seconds). **Day 2: Lower Body (Legs & Core)** **Warm-up (5-10 mins):** * Bodyweight squats (10-12 reps) * Lunges (5-6 reps per leg) * Glute bridges (10-12 reps) * Plank (30 seconds) **Main Workout:**	## 7-Day Muscle Gain Workout Plan (Medium Intensity) This plan focuses on compound exercises to maximize muscle growth and utilizes a push-pull-legs split with rest days strategically placed for optimal recovery. **Day 1: Upper Body Push** **Warm-up (5-10 mins):** * Arm circles (forward and backward, 1 min each) * Shoulder rotations (1 min) * Push-ups (as many reps as possible in 1 min) * Light bench press (empty bar, 1 set of 10-12 reps) **Main Workout:** * **Bench Press:** 3 sets of 8-12 reps * **Incline Dumbbell Press:** 3 sets of 8-12 reps * **Overhead Press:** 3 sets of 8-12 reps * **Triceps Pushdowns:** 3 sets of 10-15 reps * **Lateral Raises:** 3 sets of 12-15 reps **Cooldown:** Static stretching focusing on chest, shoulders, and triceps (hold each stretch for 30 seconds), **followed by 15-20 minutes of yoga focusing on poses that stretch the chest, shoulders, and triceps.** **Day 2: Lower Body (Legs & Core)** **Warm-up (5-10 mins):** * Bodyweight squats (10-12 reps) * Lunges (5-6 reps per leg) * Glute bridges (10-12 reps)

Description: The View All Users page in FitBuddy provides an overview of the entire user database, displaying detailed information for each registered user. This includes their personal details such as name, age, and fitness goals, along with their original workout plan generated at registration and the updated workout plan if any changes were made based on their submitted feedback. This feature enables a transparent view of how each user's plan has evolved over time, showcasing the adaptability of the FitBuddy system and helping administrators or developers monitor user progress and engagement effectively.

Conclusion:

The FitBuddy – AI Fitness Plan Generator is a comprehensive, user-centric web application that showcases the powerful synergy between artificial intelligence and health-tech solutions. Designed to assist individuals in achieving their fitness goals, FitBuddy uses Google's Gemini 1.5 Pro and Gemini Flash models to generate personalized 7-day workout plans and daily nutrition or recovery tips based on user inputs such as age, weight, fitness goal, and preferred workout intensity.

The application is built using the FastAPI framework for backend logic and API handling, SQLAlchemy with SQLite for persistent data storage, and Jinja2 templating for a clean and responsive frontend. Upon submitting their details on the homepage, users receive a tailored workout plan that includes warm-ups, main workouts, cooldowns, and goal-aligned tips. What sets FitBuddy apart is its dynamic feedback feature—users can provide input on the effectiveness or difficulty of their current plan, and the system responds by intelligently updating the plan using generative AI, ensuring ongoing customization and engagement.

Additionally, the application includes an administrative view where all registered users and their respective plans (original and updated) are displayed in a structured format. This functionality supports transparency, monitoring, and further optimization, making FitBuddy suitable for both individual users and coaches or institutions managing multiple fitness profiles.

Overall, FitBuddy stands as a scalable and adaptable AI-powered solution that not only personalizes the fitness journey but also evolves with the user's progress and preferences. It demonstrates how cutting-edge technology can be integrated into everyday wellness routines to promote healthy, consistent, and goal-oriented lifestyles.
