

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 1

### Demonstration Phase Overview

The Demonstration Phase presents the completed FitBuddy application and shows how the major features operate from start to finish.

- Introduce project
- Explain problem
- Show interface
- Run main workflow
- Show feedback update

### Demonstration Objective

The objective is to clearly prove that the implemented system satisfies the planned requirements.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 2

### Presentation Preparation

Before the demonstration, the application, database, dependencies and Gemini API configuration should be checked.

- Start server
- Check API key
- Check database
- Open application
- Prepare sample inputs

### Demo Materials

Keep the project report, architecture diagram, flowchart, screenshots and test results available for explanation.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 3

### Project Introduction

Begin by explaining FitBuddy, its purpose and the problem it addresses: creating personalized fitness guidance through an AI-powered web application.

- Project title
- Problem statement
- Objectives
- Technologies
- Main features

### Architecture Explanation

Briefly explain the flow between frontend, FastAPI backend, Gemini AI and database.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 4

### Live User Input Demonstration

Show the main page and enter a sample set of fitness details.

- Enter name/user ID
- Enter age
- Enter weight
- Select fitness goal
- Select workout intensity

### Input Explanation

Explain why each input is used and how it contributes to personalization.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 5

### Workout Generation Demonstration

Submit the form and show the generated 7-day workout plan.

- Show request processing
- Display workout plan
- Explain daily structure
- Point out goal/intensity relevance

### Nutrition Demonstration

Show the nutrition or recovery tip generated along with the workout result.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 6

### Feedback Demonstration

Enter sample feedback such as requesting additional cardio or yoga and submit it.

- Show feedback input
- Submit feedback
- Process original plan
- Generate updated plan
- Display revised plan

### Update Explanation

Explain that the revised plan is based on the original plan and the user's requested changes.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 7

### Database/Admin Demonstration

Open the all-users view and show how stored user and plan information can be viewed.

- Show user records
- Show plan records
- Show original/updated information

### Data Flow Explanation

Explain how information moves from the form to the backend, AI service, database and result page.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 8

### Testing Evidence Demonstration

Present selected test results and screenshots showing successful operation.

- Input test
- Route test
- AI test
- Database test
- Feedback test

### Error Handling Demonstration

If appropriate, explain how invalid input or configuration problems are handled without exposing sensitive API credentials.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 9

### Final Presentation and Conclusion

Conclude by summarizing the problem, solution, technologies, major features, testing and achieved result.

- State project objective
- Summarize implementation
- Show final output
- Mention testing
- Explain future scope

### Demonstration Checklist

Ensure the application is running, sample data is ready, internet/API access is available and all screenshots/report sections are prepared.

# FitBuddy – AI Fitness Plan Generator

## Project Demonstration Phase – Page 10

### Demonstration Summary

The demonstration should provide a clear practical view of FitBuddy rather than only describing the source code.

- Show the working application
- Explain each major module
- Demonstrate complete workflow
- Answer project questions

### Final Conclusion

A successful demonstration shows the complete journey from user input to AI-generated plan, feedback-based revision and stored results.
